

SPARTAN SERIES BASIC MODE

Operating Features
Of the Electronic Combination Lock

SAFE & VAULT MANUFACTURERS

1. ANTI TAMPER FEATURE:

If 5 incorrect codes are entered in a row, the lock will enter a 3-minute penalty period. During which it will not accept input. Pressing a key during the penalty time extends the period a few seconds.

NOTE

If your lock does not respond to key presses and the keypad's red LED blinks once every 10 seconds, the lock is in penalty time. Do not press any buttons for at least 3 minutes, then try your code again.

2. LOW BATTERY INDICATION:

Multiple beeps at the end of a code number entry means the battery needs replacing.

3. CHANGING YOUR BATTERY:

- Pull the TAB at the base of the keypad towards you to release the battery.
- Remove and replace the battery with a 9 Volt- Alkaline battery DURACELL.
- Insert the battery and pod and ensure it is firmly in place.
- Fitting of an incorrect battery type may result in intermittent operational problems.
- It is important the replacement battery has a long use by date for efficient operation.

4. BATTERY TYPE:

Use Duracell Procell Alkaline 9 Volt Batteries only.

TO OPEN:

- Enter 1 2 3 4 5 6 (Factory Setting)
- Each number is accompanied by a BEEP.
- 2 Beeps after 6 digit code entered signifies number accepted.
- 3 Beeps after 6 digit code entered indicates wrong number..

TO LOCK:

- Close safe door and turn handle to close position.
- The lock will lock automatically.

TO CHANGE NUMBER:

- CAUTION: Change code with door open & locked
- 1. Enter 0 0 0 0 0 0 (6 zero's)
- 2. Enter the old code (Factory set 1 2 3 4 5 6)
- 3. Enter new code twice e.g. (142536 + 142536)
- 4. 2 beeps signify new code has been accepted.
- 5. Test new number.

NOTE

The code remains existing if the above steps are not followed correctly.

Use ALKALINE Batteries Only - 9V Duracell or Energizer are recommended
